

**SPECIFICATION AMENDMENTS:**RECEIVED  
CENTRAL FAX CENTER

OCT 01 2007

Please amend the specification as indicated:

Please amend paragraph [0020] as follows:

[0020] In practice, a collaborative call system employing a technique like technique 10 may operate at a remote server or computing platform that executes instructions that effectuate technique 10. In such a system, the remote computing platform may include a computer-readable medium containing computer-readable instructions capable of instructing the platform to initiate presentation of a host graphical user interface (GUI) in connection with a collaborative call. A computer-readable medium may include any one, several, or all of the following, but is not limited to the following: disk drive memory storage, Read Only Memory (ROM), flash memory, portable storage memory including compact disk (CD), digital video disk (DVD), other portable non-volatile and volatile storage media, random access memory (RAM), non-portable non-volatile storage media and non-portable volatile storage media. The host GUI may include an administrator icon and a listing of call participants. The instructions may also cause the platform to initiate presentation of a participant GUI having an appearance different than the host GUI and to update information presented in the host GUI in response to a status change of a call participant. Caller status may include, for example, an on-call state, an off-call state, a currently speaking state, a waiting to speak state, a paused-call state, or some other state.
